

## **New Features of ExitCare® version 6.6**

**Patient Summary Page** – New printable page for patient summarizing visit information, including patient demographics, visit time and caregiver details, what info sheets were provided, and all follow-up info listed.

**Patient Signature Page Change** - New option for the patient signature page to show all questions, including unanswered ones, or just questions that have been answered.

**Purging** - Purging Patient Archive and Purging Audit Tracking Log features now available for those who want to purge and delete that information.

**Facility Header on Drug Summary and PMS** - Drug Summary page and Patient Medication Schedule page for patients will now include the customized facility header information.

**Drug Summary and Patient Med Schedule Pages in Languages** – These info sheets now print with column heads and other labels and info in the language chosen (e.g., Spanish, Russian, etc.).

**Drug History and HL7** - HL7 Interface now includes the ability to better receive patient drug history information for use with the ExitMeds Medication Reconciliation feature.

**Disclosure on Med Rec for Patient** - New disclosure statement on the Medication Reconciliation form that “patient has reviewed the home meds and found no contraindication...etc.”

**More granularity for adding Departments** - User added departments can now apply only to a particular facility (if part of a group/enterprise).

**Additional Notes Improvement** - Users can now edit Additional Notes in the existing library “on the fly” while changing one for a particular patient.

**Drug Info Sheets Only Print Option** - When printing only Drug Information sheets, Users can now select English or Spanish.

**Button Tool Tips** - “Tool Tips” now “pop up” when pointing to edit document screen buttons (e.g., insert graphic, bold, etc.).

**Document Category Cloning** - Users can now “clone” the ExitCare supplied document categories so that they can easily and quickly create their own custom document categories.

**Cloning Document as Form** – You can now clone a document and save as the special “form” type of document.

**Fax System Change** - Fax system now embeds graphic images (if any).

**Follow-up Fax/email change** – Faxing or emailing to follow-up caregiver(s) now only the patient signature page (which has been enhanced with more info). Also changes the font size to 11 pt for faxing for easier reading of fax.

**User Info Removed from Signature Page** – When faxing or emailing the patient signature page to follow-up providers, the User Info section (name, user ID of person logged in to print the set) is no longer included.

**E-Mail to Patients** – When selecting to email info to patient, entire set of printed info, except prescription(s), is emailed to patient.

**Update Notification** - When Users' ExitCare version is more than six months old (two quarterly updates), a message will appear informing the User that they should arrange for the update.

**ExitCare-Web Archive Viewer** – If moving from the previous version of ExitCare-Web to the new version (web-enabled ASP model of the regular ExitCare version 6.6 or higher), a button will be created to allow access to the previous version of ExitCare-Web patient data.

**Drug List Editing** - The strength of a drug listed on the drug summary tab/screen can now be changed on that page without having to return to the drug pick/creation screen.

**Adding New Users to Security Easier** – When adding new users to the ExitCare Security system, clicking to add a new user automatically puts cursor in user first name box.

**Screen Resolution Notice** – When running ExitCare in less than 1024x768, notice displayed to inform that ExitCare is designed for running in 1024x768 or higher resolutions. Running in 800x600 does not allow enough space to display ExitCare properly.

**Update Disks Verify Higher Version Before Upgrading** – When a quarterly update disk is installed, the routine now checks to be sure that the contents of the update disk are newer than what is already installed, preventing an “upgrade” from actually “downgrading” to an older version.
