

New Features of ExitCare® version 7.1

ExitCare System

Document list driven by entered diagnosis– A new drop down list appears on the Patient Information screen allowing users to select at least one diagnosis. When they click 'Choose Title' button it will default to the document by diagnosis tab, otherwise the tab is hidden.

User created Question/Answer Fields– Added new user functionality allowing the creation of personalized question and answer fields for user created custom documents or existing documents.

Custom/Cloned documents are language supported– Added new user functionality for cloned or custom created documents allowing users to specify translated languages to associate with their document title.

Document search optimized by the use of keywords– Added new user functionality allowing the ability to search for documents by entering keywords. Combine two or more keywords with “and” for a more filtered, quicker search.

Security Display for DEA#, StateID and NPI on front screen – Added new security feature to show DEA#, StateID and NPI as asterisks on the patient information screen.

Reduced Signature Page for faxed documents– Faxed documents now have a setting option to use a reduced signature page.

OEM Interface data update– The ability now exists to add drug sheets, medical summary information etc that can be returned as an .mqe file for addition to OEM charts.

Macros security rights– Added control to Security System to allow rights to be set for Macros to create SAVE or SAVEAS to avoid accidental modifications.

Login Archive Record view type– Added new login security control to Security System to only allow access to view the archive record(s) and no other access.

Additional Attending Caregiver phrase– Added the option to select the phrase “Discharging Physician” to display in place of Attending Caregiver.

License renewal / expiration timer options– Added new user friendly license reminder option. Users can select a pre-determined amount of time for displaying the license warning message stating ExitCare is 60, 45, 30, or 15 days from expiration. Default is 60 days if option is left un-changed.

Recent Patient Record discharge Instruction alert– Dialog notification sends an alert to users when existing discharge instructions are available for a recent patient record. ExitCare presents the user with the following choices, use the recent patient record, delete the record or use what is in the import.

Follow-up Caregivers Font size increased and Bolded– Follow-up text is now bold, the discharge instructions fonts have been increased, increased the font size of the Follow up caregivers and the font size of additional notes.

Archive Annotations on Patient Lookup screen– Added ability to annotate errors for an accidental discharge instruction(s) or printed script(s). Add Note or Edit Note buttons allow users to clearly state errors. Additional notes are able to be appended to the original note if desired.

Clinic name now displays within Follow-up selection– Adding a follow-up caregiver or additional follow-up caregiver(s) (from the Documents screen) now includes the clinic name.

Unique Fax and Email disclaimers per Department– Added disclaimer section under Department settings allowing unique email and fax disclaimers configurable by department level.

Fax field edits permission based– New permission setting was added - to enable/disable user(s) from making changes to the fax field on the patient information screen.

Email field permission based– New permission setting was added - to enable/disable user(s) from making changes to the email field on the patient information screen.

Standalone Archive viewer– Added new functionality for viewing the Archive and license options providing the user with the options to install a new Authorization file, Continue and only use the Archive or Exit.

Global Settings– Added a new options providing the ability for changing department settings globally or at a Facility level.

Facility Level Defaults setting– Added new department general and security setting options which act at the Facility level. This new Department setting populates all Departments with the same settings thus eliminating the need to configure departments individually.

Facility/Department Cloning– Added a new option providing the ability to clone settings from one facility or department or multiple departments (by selection) to an additional existing facility or department.

Administrator Presets– Added new administrator level preset that allows the Admin to determine the highest level users are allowed to save changes to, changes affect Facility or Global levels only.

DOB field requirement– The patient date of birth is now a field that can be made a requirement through the Department Settings options.

ExitMeds System

Status Reports – Added new status information which includes the patients name, PID and Medical Record # now show in the center of the header on ever page.

Audit Report ‘By logged in User’– Added new Drug History report generating an audit trail of the following information, user activity, logged in user, authorized override user, attending doctor and override doctor to show in ExitMeds script reports.

Add * before and after amount on script forms**– A new prescription formatting display option now exists for identifying medication quantities with asterisks preceding and following the quantity; meeting New York State requirements.

Drug Interaction control for Departments not using drug interaction system– Department options has a new ability to set the use of Drug Interaction System or to remove from application function. When enabled ExitCare will act like the users are not authorized for drug interactions.

Patient Medication Schedule signature page– Printed PMS only includes the prescribed drugs on the signature page, if the user does not print PMS the signature page will make no mention of what was not printed.

Drug Allergy field now mandatory– Department and Facility settings now exist to allow the drug allergy field to show as a required field on the Patient Information screen. Must select “no allergies” or specify an allergy.

Patient Import w/ Drug updates– Added the ability to present imported patient records that contain drug updates and deletions. Supported through @PrescriptionNumber and @PrescriptionStatus with identification of drug status through N = new drug (add to ExitCare), C =Changed drug (updated) and D = Delete Drug. The new functionality works with HL7 and OEM.
